PHP API Tutorials

The PHP API is also commonly referred to as the "*Public API*". Currently it exposes a Repository which allows you to create, read, update, manage and delete all objects available in eZ Platform, first and foremost content, but also related objects like Sections, Locations, Content Types, Content Type groups, languages and so on.

> If new to eZ Platform, also if coming from eZ Publish 3x/4.x, check out our Glossary for terms and expressions *(our Domain Language).*

For more information on high level architecture overview, see Architecture.
