Repository forms

- Repository: http://github.com/ezsystems/repository-forms
- Package: http://packagist.org/packages/ezsystems/repository-forms

This package provides form-based interaction for the Repository Value objects.

It is currently used by `ezsystems/platform-ui-bundle` for most management interfaces: Sections, Content Types, Roles, Policies, etc.

Other forms in Platform that interact with the Repository will also be based on it (User registration, or any form on the frontend that manipulates content or other repository objects).
