ez_field_name

Description

`ez_field_name()` is a Twig helper which returns a Content item's field FieldDefinition name in the current language.

This can be useful when you don't want to use a sub-request and custom controller to be able to display this information.

> If the current language cannot be found as a translation for content, the main language will be used. This behavior is identical when forcing a language using **forcedLanguage.**

Prototype and Arguments

`ez_field_name( Content|ContentInfo content, string fieldDefIdentifier[, string forcedLanguage] )`

Argument name	Type	Description
content	eZ\Publish\Core\Repository\Values\Content\Content or eZ\Publish\Core\Repository\Values\Content\ContentInfo	Content / ContentInfo object the **fieldDefI dentifier** belongs to.
fieldDefIdentifier	string	Identifier of the field we want to get the FieldDefinition name from.
forcedLanguage	string	Language we want to force (e.g. "jpn-JP"), otherwise takes prioritized languages from SiteAccess settings.

Usage

```
<label for="ez-content-article-title">{{ ez_field_name( content, "title" ) }}</label>
```
