

Setting the Index Page

The Index Page is the page shown when the root index / is accessed.

For each siteaccess, you can configure IndexPage, as in eZ Publish 4.x. Put the parameter `index_page` in your `ezpublish.yml` file, under the right siteaccess category.

ezpublish.yml

```
ezpublish:
  system:
    mygreat_site:
      languages:
        - eng-US
      #The page to show when accessing IndexPage (/)
      index_page: /yourURIPage
```

If not specified, the `index_page` is the configured content root.
