Places Block

Overview
Places Block allows you to create a list of places with their details.

The Places Block displays a list of all place Content items in a folder you choose.

The list will contain the name and photo thumbnail of the place. It will allow you to enter the place entry with further information about the place, including location on a map.
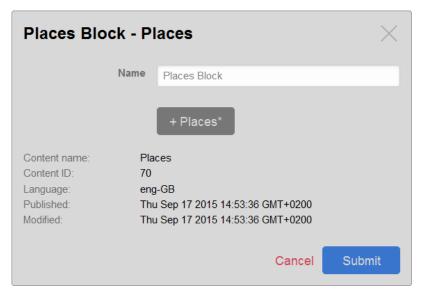

Available Places Block settings

Option	Description
Name	Enter the Places Block name.
Places	Use the Universal Discovery Widget to select a folder.

Places Block configuration window

Tip   When you select a folder, the information about it will be shown in this window.

Choosing places to display

You can select places to display in the Universal Discovery Widget.

> You need to select a folder with places, not a single place Content item, for the Places Block to work.
