Author Field Type

Field Type representing a list of authors, consisting of author name, and author email.

Name	Internal name	Expected input	Output
Author	ezauthor	Mixed	String

Description

This Field Type allows the storage and retrieval of additional authors. For each author, it is capable of handling a name and an e-mail address. It is typically useful when there is a need for storing information about additional authors who have written/created different parts of a Content item.
