

# Requirements for doing an automated installation

5.X

The requirements for an automated installation are the same as for the normal installation method. Please refer to the "Requirements for doing a normal installation" page for more information.

## New requirements since version 4.5

In order to do an offline installation with the use of `kickstart.ini`, all required files must be downloaded from <http://packages.ez.no/ezpublish/> and extracted to `var/storage/packages/eZ-systems`

### **ezwebin:**

`index.xml` `ezwebin_site.ezpkg` `ezwt_extension.ezpkg` `ezgmaplocation_extension.ezpkg` `ezstarrating_extension.ezpkg` `ezwebin_classes.ezpkg`  
`ezwebin_democontent.ezpkg` `ezwebin_design_blue.ezpkg` `ezwebin_design_cleangray.ezpkg` `ezwebin_design_gray.ezpkg`  
`ezwebin_extension.ezpkg` `ezwebin_banners.ezpkg`

### **ezflow:**

`index.xml` `ezflow_site.ezpkg` `ezwt_extension.ezpkg` `ezgmaplocation_extension.ezpkg` `ezstarrating_extension.ezpkg` `ezwebin_extension.ezpkg`  
`ezflow_classes.ezpkg` `ezflow_democontent.ezpkg` `ezflow_design.ezpkg` `ezflow_extension.ezpkg`

The following extraction method is used for each `.ezpkg`:

1. Create a new directory with the same name, except for the `.ezpkg` suffix
2. Extract the `.ezpkg` file into it's directory with "`tar -xzf`"

Note that the `index.xml` file should be stored to `var/storage/packages/eZ-systems`

The next section [section](#) explains how eZ Publish can be configured to do an automated installation of itself.
