PHP API Field Type

Input expectations

Type	Example
string	"http://www.ez.no", "eZ Systems"

Value object

Properties

The Value class of this field type contains the following properties:

Property	Type	Description
$link	string	This property will be used to store the link provided to the value of this Field Type.
$text	string	This property will be used to store the text to represent the stored link provided to the value of this Field Type.

> ### Value object content example
>
> ```
> $url->link = "http://www.ez.no";
> $url->text = "eZ Systems";
> ```

Constructor

The `Url\Value` constructor will initialize a new Value object with the value provided. It expects two comma-separated strings, corresponding to the link and text.

Constructor example

```
// Instantiates an Url Value object
$UrlValue = new Url\Value( "http://www.ez.no", "eZ
Systems" );
```

Validation

This Field Type does not perform validation.
