ez_field_value

Description

`ez_field_value()` is a Twig helper which returns a Content item's field value in the current language.

This can be useful when you don't want to use ez_render_field and manage the rendering by yourself.

> If the current language cannot be found as a translation for content, the main language will be used. This behavior is identical when forcing a language using **forcedLanguage.**

Prototype and Arguments

ez_field_value(eZ\Publish\API\Repository\Values\Content\Content **content,** string **fieldDefIdentifier**[, string **forcedLanguage**] **)**

Argument name	Type	Description
`content`	`eZ\Publish\API\Repository\Values\Content\Content`	Content object the field referred to with **fieldDefIdentifier** belongs to.
`fieldDefIdentifier`	`string`	Identifier of the field we want to get the value from.
`forcedLanguage`	`string`	Locale we want the content name translation in (e.g. "fre-FR"). Null by default (takes current locale)

Usage

```
<h2>My title value: {{ ez_field_value( content, "title"
) }}</h2>
```
